

AUTOMATIC CONFERENCING SERVICE

ABSTRACT OF THE DISCLOSURE

5 One embodiment disclosed relates to an apparatus for an automatic
conferencing service. The apparatus includes at least a service logic execution
environment in a telecommunications service network, and an automatic
conferencing service running in the service logic execution environment.
Another embodiment disclosed relates to a method of scheduling an automatic
10 conference. A conference request, including conference information specified by
a user, is received by an automatic conferencing service running in a service
logic execution environment within a telecommunications network. The
automatic conferencing service registers the conference and sends notification
to attendees of the conference.
